

Library Book Issue and Return Record Maintaining System

- Created By **Mr. Dhvanil Patel**, Student of **M.Sc. Applied Statistics** Batch **2021-23**

- Till now we are using **offline manual book register** for book Issue and Return.

Problems :-

Problem is being faced by both **Students and Management**

1. Students

- **One Student had to wait** until next student issues his/her book.
- At the time of **returning book** student need to **manually find record** of that particular date with his/her name.

2. Management

- **Management** had to do all the **calculation manually** whenever any information required.
 - As for example at the end of year **how many books were issued?**
 - **Which book was issued the most ?**
 - By this management can decide **which book is most demanded** and can increase number of that books so that **any future shortage of that books can avoided.**

Why to switch over this system?

How to solve these problems ?

✓ I created this system fully online using Google Form and Google Sheets

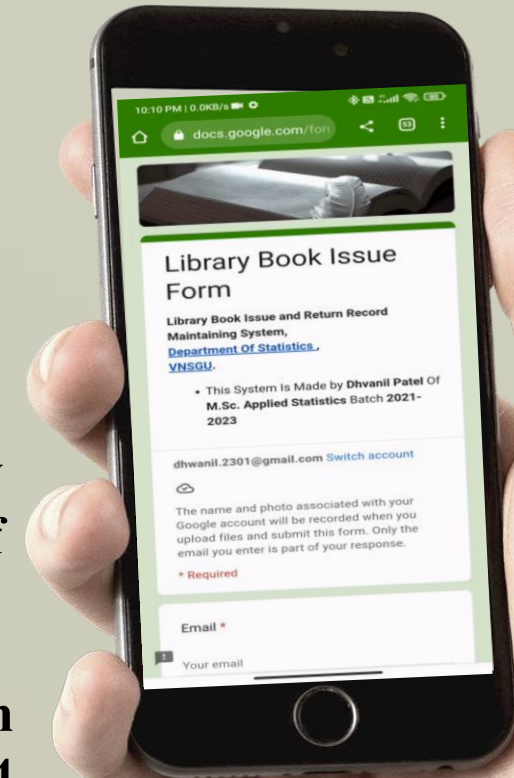

➤ There are two forms

1. Book Issue Form
2. Book Return Form

✓ Google Sheet fetch live data from these **google forms**.

✓ Student gets **E-mail immediately** after issuing book as **proof of issuing partiture book**

✓ Student will receive an Reminder E-mail after 14 days of issuing book.

✓ All student can fill this form **together concurrently**.

✓ All student **gets immediate E-Mail of issued book** with as **Advantages**
a proof of issuing book

✓ From this E-Mail student get details about **on which date student issued which book.**

✓ Person who issued book also **gets Reminder as an E-Mail after 14 Days of Book Issue if book is not being returned in 14 Days time period.**

✓ **For Management** this system results in very **easy retrieval of data** whenever needed, as this **data is now being stored in Excel Sheet rather than Offline manual Register.**

✓ This would be an **advantage that student will return book on time** as they are **getting reminder E-mail.**

✓ Thus, this system becomes **Easy for Student and Management** both
